

Riverside-San Bernadino Counties

CURRENT SETTING

The Inland Empire Counties of Riverside and San Bernardino are currently leading the State of California in job creation. Last year, nearly 55,000 wage and salary jobs were created in the region, implying a robust 6.1 percent rate of growth. By 2000, the rate of job growth has cooled slightly, to 5.5 percent. Total wage and salary jobs in the Inland Empire will exceed one million this year, and unemployment has fallen to 4.4 percent, the lowest rate ever recorded.

The two-county metropolitan statistical area originally was a thriving farm community in Southern California. Though farming is still very important to the regional economy with over 20,000 wage and salary jobs and \$1.9 billion in sales, the industrial sector has dominated economic growth over the last 10 years. Since 1990, jobs in manufacturing have jumped 50 percent to the highest level on record.

There are 3.3 million people residing in the region, with 53 percent living in San Bernardino County. The median selling price of a home is very affordable, relative to the rest of Southern California. In Riverside, the median price in 1999 was \$131,500. In San Bernardino, the median price was \$126,400.

FORECAST SUMMARY

- Total wage and salary employment is expected to increase an average of 2.6 percent a year between 2000 to 2020. By 2020, the service sector will account for 31 percent of total regional employment, up from 26 percent in 1999. Manufacturing employment is forecast to rise 3.3 percent per year over the forecast period.
- Employment in the trade sectors is expected to grow by a total of 34 percent over the 21-year forecast, as real retail sales increase at an average annual rate of 2.0 percent. Over the first seven years of the forecast, the annual increase in inflation-adjusted retail sales is expected to average 2.6 percent.
- Per capita personal income is forecast to grow modestly from an estimated \$20,819 in 1999 to \$25,079 (1999 dollars) in 2020. At an average annual growth rate of 0.9 percent, this rate of increase lags behind the anti-

pated 1.9 percent annual rate at which real per capita personal income will grow in California.

- The number of registered vehicles is forecast to grow at an average annual rate of 1.6 percent from 2000 through 2008, then at an average rate of 2.5 percent per year through 2020.

EMPLOYMENT

The two-county region ranked number one in the State in job growth in 1999 and is leading the State again in 2000. The Inland Empire is expected to create more jobs in Southern California over the next 20 years, than any other labor market area except Los Angeles County. Total wage and salary employment is forecast to rise 5.2 percent in 2000, 3.8 percent in 2001, and 3.6 percent in 2002. Between 2003 and 2010, job growth averages 2.9 percent per year.

The leading sector of job growth is expected to be transportation, communications and public utilities, averaging 4.4 percent gains per year between 2000 and 2010. The manufacturing sector is expected to grow jobs at an average

rate of 3.6 percent per year for the next 10 years, and 3.2 percent thereafter.

Job creation in services is forecast to average 3.4 percent per year through 2010, and 3.1 percent per year thereafter through 2020. The public sector (education) is forecast to rise 2.4 percent per year.

INCOME

Personal income grew 5.6 percent in 1999, and per capita income rose 3.3 percent. Adjusted for inflation, per capita income improved 0.6 percent in 1999. Personal income is forecast to rise an average 5.3 percent per year between 2001 and 2010, and 4.7 percent thereafter. Infla-

tion adjusted per capita income will grow 0.6 percent per year until 2010, and 1.1 percent thereafter.

Income gains will be modest compared to other counties because local average salaries are expected to lag behind salaries elsewhere in the State. The cost of living—especially housing—will remain lower in the region than elsewhere in coastal California.

Average earnings, adjusted for inflation, are expected to increase an average 1.0 percent per year between 2000 and 2010, increasing to 1.2 percent per year between 2011 and 2020. Inflation adjusted consumer spending on retail sales averages 2.2 percent growth per year during the first 10 years of the forecast.

Note: Historical data is shown for the years 1990 to 1999; forecasts begin in the year 2000

HOUSING AND DEMOGRAPHICS

Higher rates of net in-migration are expected to prevail in the region in 2000 and each year through 2003, to accommodate the demand for workers. Over 40,000 people are expected to migrate into the region, keeping population growth near 3.0 percent per year through 2003. The rate of migration and the growth of population are expected to weaken after 2003.

The demand for housing is forecast to rise over the next several years, and weaken during the last 10 years of the forecast. New residential units are forecast to average 23,700 per year between 2000 and 2010.

The number of new residential units permitted is ex-

pected to range from 20,000 to 27,000 per year over the forecast period. Housing densities will rise until 2006, and moderate thereafter. The number of registered vehicles is expected to increase an average of 2.2 percent a year over the forecast horizon, rising from 2.18 million in 1999 to 3.41 million in 2020.
